Clips and short stories

We create music AI clips, Reels and sketches: design the scene, bring characters to life, combine motion and sound in one edit.

Video portfolio: https://devnomad.studio/en/content/

Music video · 32 seconds

Two heroines. One rhythm.

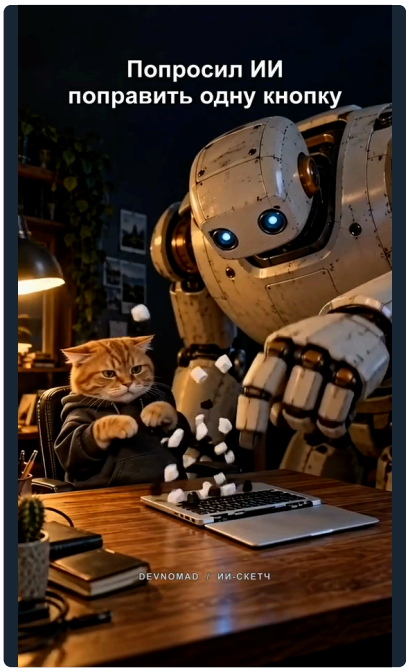

Singing, dance movement and location changes. Edit matched to musical accents and final call for SiliconSense.

Music teaser · 22 seconds

Okay, bot

Black and white puppet punk. Broken dancing, close-ups and sharp edit accents to music. First vertical version.

Short story · 8 seconds

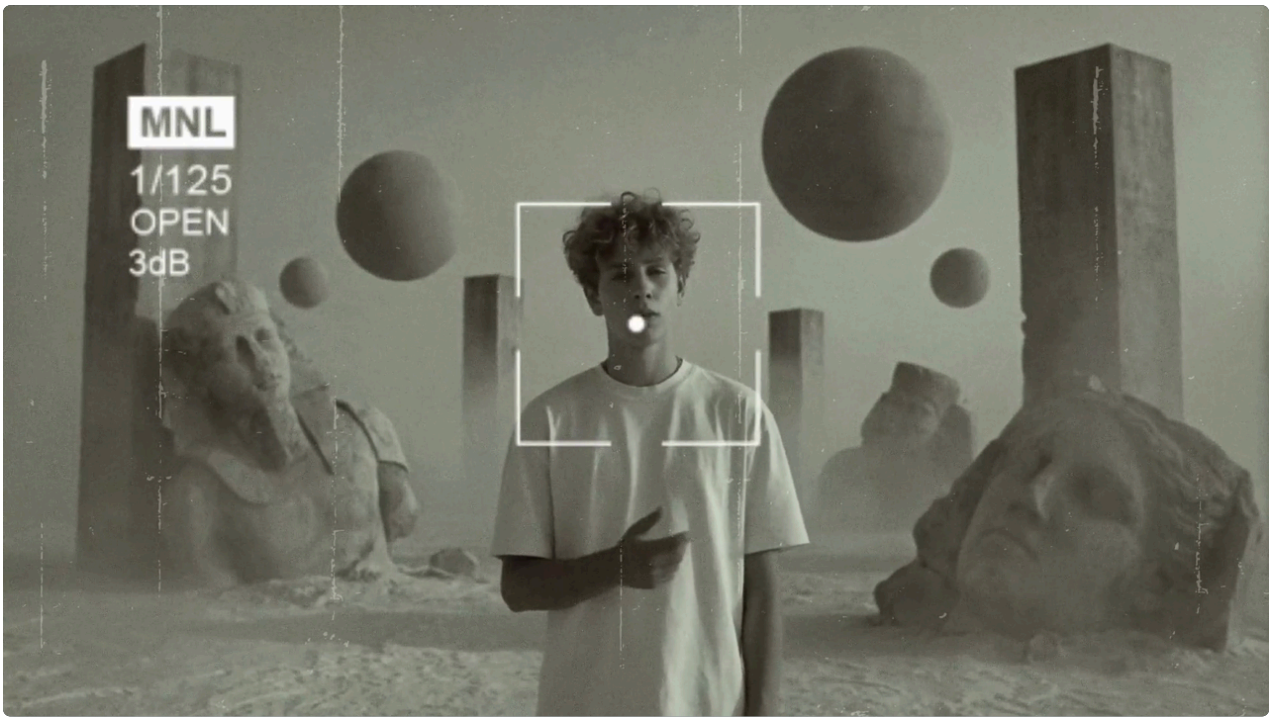

Just one button

A cat, a robot and a task that went wrong. Visual humor and clear action in a short scene.

Our finished works. Videos play with sound on click. Compressed copies for viewing on this page.

Full music video

The LEO’s · Blind Men’s Greed

Complete version with final credits. Two performers, singing shots, story inserts and edit to the full song.

Black and white base with transition to color in the finale. Example of work with photographs of real performers and sequential scene revisions. The song contains profanity.

Formats and pricing

Price depends on scenes, not just duration. Below are starting budgets for the specified volume. Final estimate agreed before production.

Test scene 5–8 seconds	One character, one location, one action. We check the look and movement on your material.	**from 5,000 ₽**
Visualizer 15–20 seconds	Up to three visual scenes to a finished track. No singing close-up or spoken dialogue.	**from 12,000 ₽**
Music teaser 20–35 seconds	One character, up to four unique scenes and one singing fragment up to 8 seconds. Edited to your track.	**from 25,000 ₽**
Reel or sketch 20–30 seconds	Up to two characters, one location, up to four scenes. Script, voiceover, sound and editing.	**from 22,000 ₽**
Full music video Full song	We calculate after listening: duration, story development, characters, locations and amount of singing on screen.	**By estimate**

What's included

For a finished video: agreed script, scene generation, editing, color and sound, two rounds of editing revisions, MP4 in one agreed format and a cover frame. The cost of a test is credited toward the full order.

What changes the budget

Additional characters and locations, complex choreography, long singing close-up, script changes after approval, new scenes and a separate version in another format. We estimate everything before launch.

> Failed technical takes we include in our production reserve. We do not charge additional expenses without your agreement. A paid test does not obligate you to order the full clip.

From track to finished video

1. **Task and estimate**

   We receive the track, wishes and references. We clarify the audience, duration and platform. We agree on script, scope, timeline and payment stages.

2. **Image and test scene**

   We show the direction and a paid test. You assess the character, movement and quality before we produce the remaining scenes.

3. **Production and editing**

   We assemble scenes according to the approved plan. We check musical phrases, rhythm, continuity of images and mouth movement.

4. **Revisions and delivery**

   You send comments with timecodes. We make agreed revisions and deliver the file for publication. We agree the signature and call to action to match your task.

What we check in every video

Music determines the edit

We mark the intro, phrases, pauses and strong beats. The hit, gesture and cut should land at the right moment. Sometimes the best editing move is to let the character finish the phrase.

Voice plays the scene

In a sketch we set intention and intonation for each line. We check who the character is speaking to, where a reaction is needed and where a pause works better than another phrase.

Character stays true to themselves

We check face, costume, proportions and logic of actions between scenes. A reference helps us choose the language of movement and light, not copy someone else's clip frame by frame.

Video is ready for publication

We check sound, text readability and subtitle placement relative to social media interface. By default we deliver Full HD; we discuss original generation resolution and upscaling honestly.

GRZNT

Clip and track release

When ordering a music video, preparation and delivery of one related track to streaming platforms are included in the price.

Through us a release comes out only under the GRZNT label, through our distributor. This is a separate stage: we agree on title, authors, cover, date and available platforms.

Included hosting service does not mean there is no commission on income. The label's share, distributor's deductions, reporting, hosting period and transfer procedure are fixed separately before release. Rights belonging to you are not transferred to the label automatically.

Release acceptance depends on distributor rules and platforms. Advertising, playlist placement, track creation, mastering and new cover art are not included in free hosting. AI music releases are pre-checked against your material conditions and the distributor's requirements.

Before you start

- How much will a music video for a three-minute song cost?
- Can I use my photos and characters?
- What if I don't like the test scene?
- What corrections are included?
- What are the timelines?
- Will there be exact likeness and perfect singing in every frame?
- Can I use the video in advertising? What about the source files?
- Do you guarantee views and plays?

Send a task

Send a track or its fragment to Telegram, desired length, photos of characters and one or two examples of what you like. Add the platform, deadline and comfortable budget. If you don't have ideas yet, we'll start with that.

Write to DevNomad · t.me/dev_nomad_studio

The first message may be received by our AI assistant. Final scope of work, price and timelines are confirmed before payment. Materials transferred for generation may be processed by external services.
